

## Meet My Team

### Santa Rosa Neurology Practicum Mental Health Training Program Bio's

#### Christine M Naber, PhD

I have been practicing at Kaiser Permanente since 1999 and have been impressed by the focus on innovation and patient-centered care. As a neuropsychologist at Kaiser Permanente I have been involved in the creation of a vestibular rehabilitation program in Head and Neck surgery, the inpatient neuropsychological consulting service in the hospital, the outpatient neuropsychological service in Neurology, and the practicum program for advanced graduate students in Neuropsychology. In addition, I consult with Geriatric Medicine at our facility and have been the principal investigator on various research projects on migraines and vestibular dysfunction. I also am actively involved in the Northern California Regional Neuropsychology peer group, implementing services with a “pride in excellence” focus.

As Training Director for advanced practicum students in the Neurology Department at Kaiser Santa Rosa, my focus is to provide a depth and breadth of exposure to a wide-variety of patients with neuropsychological disorders. The patient population in Neurology allows for a rich experience in differential diagnosis. Supervision is focused on honing assessment skills, report writing, and complex diagnostic formulation. Helping shape future neuropsychologists is one of the most rewarding aspects of my job!
